

Course Title	Econometrics Techniques for Panel Data Analysis.
Course Description	The two day short course in panel data analysis is designed help students analyse data comprising both time series and cross-section elements. Students will be able to estimate a pooled regression which involves estimating a single equation across time and space.
Admission Requirements	Bachelor's degree with some experience in parametric and nonparametric quantitative methods.
Delivery Methodology	The main econometric techniques for analysing panel data will be presented in a lecture format followed by a practical session in a computer laboratory in the library's research commons.
Duration	Two days
Price	Please contact the course coordinator
