

Institute of Water and Wastewater Technology

Course Title	Microscopic Identification and Characterisation of Dominant Filamentous Bacteria from Activated Sludge Samples
Course Description	This course will assist the wastewater sector in identification of problematic bacteria. On completion of this course the learners should be able to adequately identify problematic filamentous bacteria from bulking activated sludge samples thereby helping the wastewater treatment plant to trouble shoot their settling problems and ensure better effluent discharge standard.
Admission Requirements	BSc/BTech microbiology
Delivery Methodology	Via lectures and practical's
Duration	14 hours
Enquiry Contact	Tel: 031 373 6750
